rationale is that concepts are considerably easier to remember than facts and that concepts, if appropriately mastered, can minimize the amount of material that has to be memorized—you can just figure everything out when required. In Basic Concepts in Biochemistry, central concepts are developed in a stepwise fashion.

Basic Concepts Incremental truncation is a method for creating a combinatorial library containing every one-base-pair deletion of a gene or gene fragment. As shown in Figure 1, the substrate for incremental truncation is a DNA fragment containing a start codon (AUG) and a stop codon (UAG). The necessary start or stop codons are indicated by the stars.
