A macromolecule is a very large molecule, such as protein, commonly composed of the polymerization of smaller subunits called monomers. They are typically composed of thousands of atoms or more. A substance that is composed of monomers is called a polymer. The most common macromolecules in biochemistry are biopolymers (nucleic acids, proteins, and carbohydrates) and large non-polymeric molecules ...

For example, some studies identify a potential of up to 100 EJ/year for bioenergy from dedicated biomass plantations on marginal and degraded lands, but the question of just how much land is really unused and available is contested (Creutzig et al., 2015; Field, Campbell, & Lobell, 2008). And, demand for land will grow even without bioenergy.

The advice in this book is very specific to the crunchy details of 5th edition D&D. I was hoping to find advice that was relevant to my usual systems (various OSR, Pathfinder, and others), but there wasn't much of that. If 5th edition isn't your game, drop two stars.
