Optimizing an ultrasound image is an essential skill during ultrasound-guided nerve blockade. Anatomically, a peripheral nerve is always located in the vicinity of an artery between fascial layers. The echotexture of normal nerve shows a hyperechoic, hypoechoic, or honeycomb pattern. There are several scanning steps to obtain adequate nerve imaging, including the selection of sonographic modes ...

This is especially true if you are having general anesthesia — the type that makes you lose consciousness. ... You are also much more likely to need a ventilator, a machine that breathes for you, after surgery. In addition, smoking reduces blood flow, which slows healing, so your surgical incision is more likely to become infected.
